Provider Search

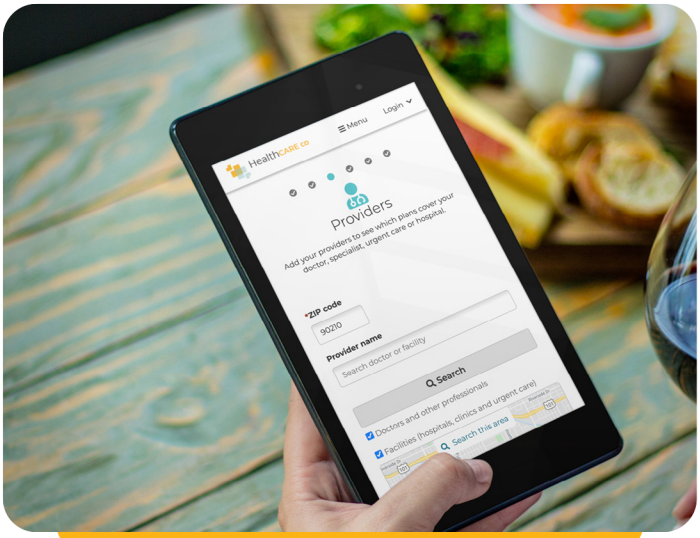
MedicareAPP

Integrated Provider Search allows agents and beneficiaries to easily find plans that cover their providers or search a plan's provider network without leaving the site.

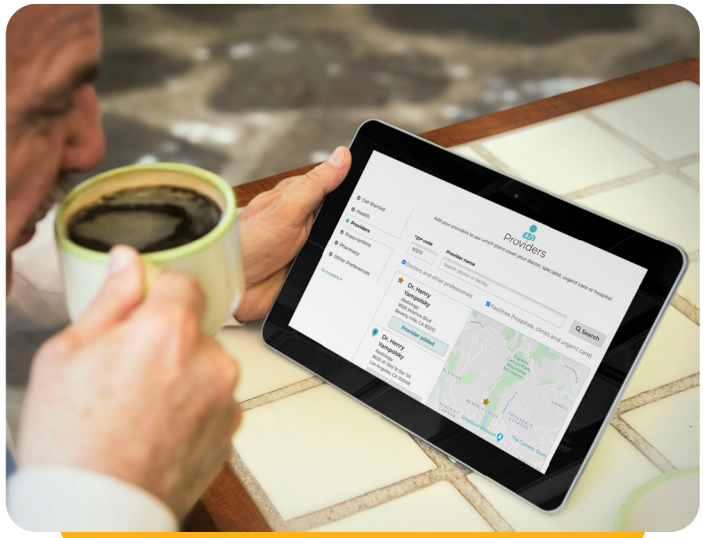
Add providers within the Guided Help workflow and view provider networks for all available plans.

When the self-selected Primary Care Provider (PCP) is an eligible PCP for the plan, the PCP ID and other PCP information will be passed into the Enrollment application.

Benefits of Provider Search include:



Search providers by zip code and narrow results when searching by provider name.

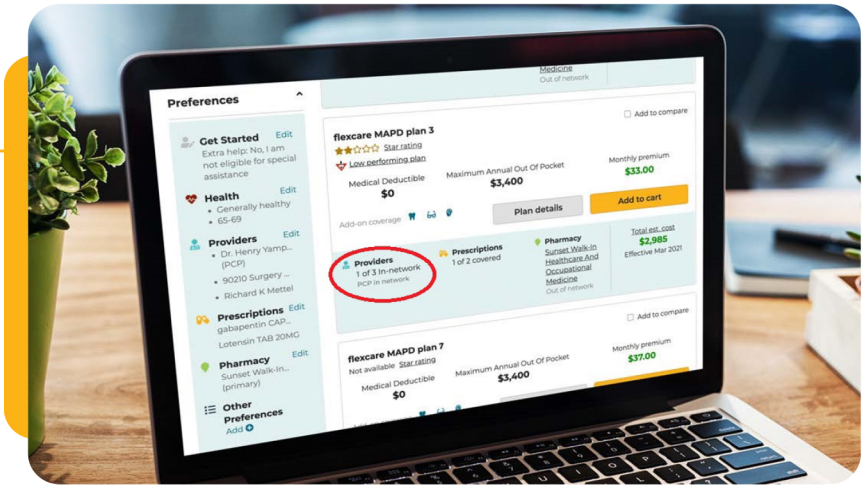


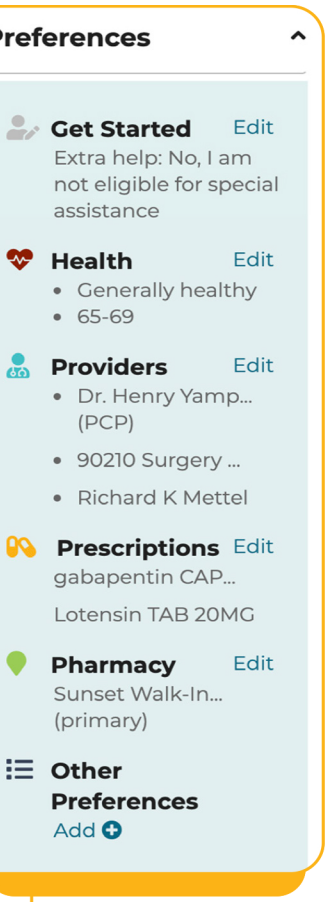
Filter by individuals and facilities to add more than just physicians to the provider list.

Select the PCP to easily check their network status by plan and validate their PCP eligibility for the plan prior to enrollment.

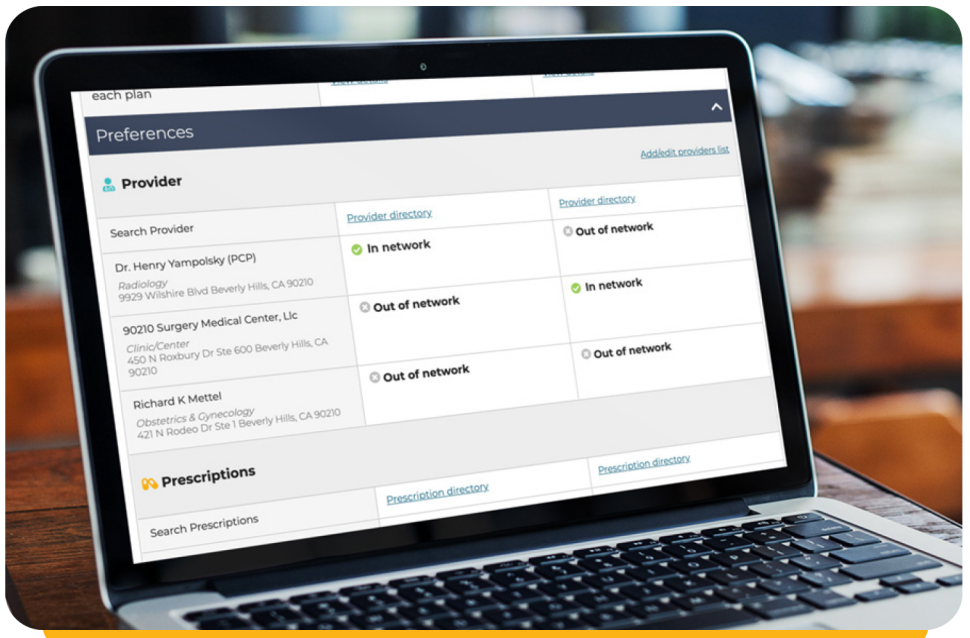
MedicareAPP

See how many selected providers are in-network by plan on the Plan List page.





Easily edit selected providers from the provider list in the Preferences section.



Click on Plan Details to see all selected providers and their network status for the selected plan.
